Pixius Communications completes the addition of the McCune, KS service area and capacity upgrade in Weir, KS service area

Kansas-based broadband provider offers new technology in service area

WICHITA, KS – High Speed Internet service from Pixius Communications, LLC (Pixius) is now available in McCune, Strauss and Montana, KS with improved service in Monmouth and West Mineral. In addition, capacity has been increased in Weir, KS. Now, consumers and businesses in these areas have a new choice to replace slow dial-up services and an alternative to cable, satellite, 3G cellular and DSL services.

The introduction of this service and the increase in capacity are a portion of Pixius' plan to bring high speed broadband data service to unserved and underserved areas in Kansas. "Fast connections are necessary to take advantage of all that today's Internet has to offer," says Pixius Chief Executive Officer Jay Maxwell. "And our Internet service relies on the most up-to-date technology."

For about the same price as cable or DSL, Pixius' wireless broadband solution — called eXtendsm — provides fast and reliable Internet access. Data download speeds for the wireless broadband service can range from 768 Kbps to more than

~ more ~

1.5 Mbps, depending on the service option and other factors. Upload speeds range from 384 Kbps to more than 1.5 Mbps. The service can be tailored to meet specific business needs. Unlike other Internet Service Providers, Pixius download and upload speeds are minimums and not 'up to' speeds.

“In many rural areas, disease and treatments are being managed via telemedicine,” says Maxwell. “Now citizens in the service area will have improved access to broadband Internet service and thus a key component required to join in this healthcare revolution.”

The eXtendsm wireless broadband service is marketed locally by Pixius Communications.

Pixius' wireless broadband was launched in Wichita, KS in late 2002 and now provides service to more than 5600 customers in Kansas and Missouri. The service is delivered via a network of more than 50 communications towers.

The service works with all types of internet products and tools, such as Virtual Private Networks (VPN), Voice over Internet Protocol (VoIP) and requires no special software. Pixius trained technicians can typically install the system within a week of order placement.

Pixius Communications (<http://www.pixius.com>) is a data communications and Internet Service Provider for residences and businesses alike. It offers standard connectivity packages as well as customized business and campus setting solutions.

A leading provider of data communications services in several Kansas markets since 2000, company headquarters are in Wichita KS.
